Strategize, Prioritize, Optimize

... KNOW before you trade!

PROBABILITY BAND SURFER

The information presented within is opinion and should be reviewed and interpreted accordingly. There is a substantial risk of loss in trading. You should carefully consider your financial condition and risk tolerance before implementing new trading strategies.

Probability Trading

Risk vs. reward is the defining element of a winning trading methodology. Use the probability band to define your likely reward in combination with high probability trading strategies for optimum results.

Every trader is different -- each has his own risk tolerance, trading ability and analytical skills. Knowing who and what kind of trader you are, is key to determining what type of indicators or trading systems you will be comfortable using. For example, many people hate to lose. But because losing is an inevitable part of the game, this is one of the worst characteristics a trader can possess. Although you cannot completely escape losses in trading, the probability bands, used in conjunction with some high probability trading strategies can help minimize the number of losing trades you may make.

PBS Bands

Financial stocks tend to oscillate well, which makes probability bands a very useful set of tools. Outside bands are particularly when the volume is low.

Probability Bands

Look for bearish and bullish price action when the ratio is above or below the Probability bands.

Hit the Surf

Easily identify buy and sell zones when you know where the market is cresting to ride the market wave up or down.

Watch Zones

The Bullish and Bearish Watch Zones give a high probability of a change in trend.
